

PSP Merchant Portal

Product Requirements Document

PRODUCT VISION

Provide merchants with a secure, simple, and transparent platform to accept payments, manage transactions, receive settlements, and - where Wallet Services are enabled - retain and distribute funds according to their business needs.

1. Product Overview

The PSP Merchant Portal is a digital platform that enables businesses to onboard, accept and manage customer payments, track transactions, process refunds, receive settlements, access financial reports, manage users, and integrate payment services into their applications.

COLLECTIONS-ONLY	WALLET-ENABLED
Merchants accept customer payments and receive eligible net funds into their verified settlement account according to an agreed cycle, such as T+1, T+2, or weekly. A wallet is not required. Customer Payment → Processing → Eligible Funds → Settlement → Merchant Account	Wallet Services are an optional capability. Eligible merchants can retain available funds and use them for refunds, supplier or beneficiary payments, customer payouts, transfers to their own account, and other supported disbursements. Customer Payment → Eligible Funds → Wallet → Merchant Determines Use

2. Problem & Opportunity

Businesses need reliable payment infrastructure that supports multiple payment channels while providing clear visibility and control over financial activity. Disconnected systems make it harder to understand transaction statuses, refunds, settlements, fees, disputes, and payment performance. The PSP Merchant Portal provides one central platform for managing these activities. For merchants with advanced financial needs, optional Wallet Services provide additional flexibility to retain and distribute eligible funds to supported destinations.

3. Product Goals

1. Provide a simple digital merchant onboarding and verification experience.
2. Enable merchants to accept payments through multiple supported payment methods.
3. Provide clear, real-time visibility into transactions, statuses, fees, refunds, disputes, balances, and settlements.
4. Protect merchants and customers through fraud monitoring and appropriate payment risk controls.
5. Support scheduled settlement of eligible merchant funds to verified settlement accounts.
6. Provide optional Wallet Services and secure transfers/disbursements for eligible merchants.
7. Provide secure self-service, reporting, user management, and developer integration capabilities.
8. Support future growth across payment products, transaction volumes, and markets.

4. Target Users

User	Primary Need
Merchant Administrator	Manages the account, users, permissions, business settings, and enabled services.
Finance User	Monitors payments, refunds, settlements, wallet activity, transfers, fees, and reports.
Operations User	Manages transactions, customers, refunds, disputes, and operational payment activity.
Developer	Manages API credentials, webhooks, integrations, and sandbox testing.
Viewer	Views authorised merchant information and reports without performing financial actions.

5. Key Product Features

Detailed functional requirements are maintained separately in the PSP Merchant Portal - Merchant-Facing Features document.

Capability	Brief Description
Dashboard	Overview of payment activity, performance, settlements, balances, and actions requiring attention.
Merchant Onboarding & Verification	Business registration and KYC/KYB onboarding, with Smile ID supporting identity and business verification.
Merchant Profile	Business information, settlement details, enabled services, payment methods, and account settings.
Payment Methods	Customer collections through enabled channels such as cards, mobile money, bank transfer, USSD, QR, and other supported methods.
Payments & Transactions	Searchable transaction history, statuses, fees, customer information, references, and transaction details.
Customers	Customer profiles and associated payment history.
Refunds	Eligible full and partial refunds linked to the original transaction.
Disputes & Chargebacks	Dispute visibility, evidence submission, response management, and resolution tracking.
Fraud Monitoring & Risk Alerts	Monitors payment activity for suspicious behaviour and provides relevant transaction alerts or review statuses where merchant action is required.
Settlements	Scheduled/completed settlements, deductions, fees, included transactions, and settlement status.

Capability	Brief Description
Wallet Services	Optional capability enabling eligible merchants to retain and manage available funds within a PSP wallet.
Fund Management	Allocation and use of available wallet funds across supported destinations and activities.
Beneficiaries	Management of approved recipients and payout destinations.
Transfers & Disbursements	Merchant-initiated movement of available wallet funds to supported destinations.
Payment Links & Invoicing	No-code payment collection through shareable links and invoices.
Reports & Analytics	Payment, settlement, refund, fee, wallet, and transfer reporting according to enabled services.
Fees & Pricing	Visibility into applicable charges, gross amounts, and net amounts.
User & Access Management	Role-based merchant user access and permissions.
Developer Tools & Sandbox	API credentials, webhooks, integration settings, documentation, and test environment.
Notifications, Audit & Support	Important alerts, traceable account activity, and merchant help/support.

6. Core Product Journeys

- **Merchant Onboarding**

Register → Business Details → KYC/KYB Submission → Smile ID Verification → Review → Approval → Account Activation

- **Payment & Settlement**

Customer Payment → Processing → Successful Payment → Eligible Funds → Scheduled Settlement → Verified Merchant Account

- **Wallet & Funds Distribution**

Customer Payment → Eligible Funds → Wallet → Retain / Refund / Transfer / Pay Beneficiary / Customer Payout / Merchant Account

- **Refund**

Select Transaction → Enter Full/Partial Refund → Review → Confirm → Process → Refund Completed

- **Fraud Review**

Payment Activity → Fraud Monitoring → Risk Identified → Transaction Flagged/Action Applied → Merchant Alerted Where Required → Review/Resolution

7. Key Business Rules

1. Only approved and activated merchants may process live transactions.
2. Required KYC/KYB verification must be completed before applicable services are activated.
3. Settlement accounts must be verified before settlements are processed.
4. Every payment must have a unique reference and traceable transaction status.
5. Refunds must be linked to the original eligible transaction and cannot exceed the remaining refundable amount.
6. Settlements must account for applicable fees, refunds, adjustments, holds, and other deductions.
7. Fraud monitoring should apply to supported payment transactions throughout the relevant payment lifecycle.
8. Potentially suspicious transactions may be flagged, held, declined, or submitted for review according to applicable risk controls.
9. Wallet Services must only be accessible to merchants for whom the service has been enabled.
10. Wallet merchants may only transfer or disburse funds from their available balance and within applicable limits.
11. Transfers may only be made to supported and approved destinations.
12. Applicable fees should be visible before confirmation of merchant-initiated chargeable actions.
13. User access and financial actions must follow configured roles and permissions.
14. Sensitive financial and account actions must be captured in the audit history.
15. Payments, refunds, wallet movements, transfers/disbursements, and settlements must be presented as distinct financial activities.

8. Non-Functional Requirements

Security	Secure authentication, MFA, role-based access, protection of sensitive information, secure sessions, and additional verification for sensitive financial actions.
Reliability	Accurate financial statuses and records, with appropriate failure handling and recovery mechanisms.
Performance	Responsive core journeys including dashboards, transaction searches, and financial records under expected usage.
Scalability	Support growth in merchants, transactions, users, currencies, payment methods, and markets.
Usability	Clear terminology, understandable statuses and errors, and simple completion of common merchant tasks.
Auditability	Important financial, user, security, and account actions must be traceable.

9. Success Measures

Area	Key Measures
Merchant Adoption	Onboarding completion rate; time to onboard;

	activation rate; active merchants.
Payments	Payment success rate; transaction value; transaction volume; failed payment rate.
Merchant Experience	Feature adoption; CSAT; NPS; support request trends.
Settlements	Settlement success rate; failed settlements; settlement-related support issues.
Wallet Services	Wallet activation; active wallet merchants; disbursement volume/value; wallet feature adoption.
Refunds & Disbursements	Refund success rate; transfer/disbursement success rate.
Fraud & Risk	Confirmed fraud rate; fraud loss rate; false-positive rate; transactions requiring fraud review.

10. Key Dependencies & Integrations

- Smile ID - KYC/KYB identity and business verification
- Card payment processors/acquirers
- Mobile Money providers
- Banking and settlement partners
- Bank transfer/payment rails
- Email/SMS notification providers
- Other supported payment and financial service providers

The merchant experience should remain consistent regardless of the underlying provider processing a transaction.

11. Product Release Criteria

- Merchant onboarding and required KYC/KYB verification can be completed successfully.
- Approved merchants can process supported live payments.
- Merchants can search, view, and understand their transactions.
- Eligible full and partial refunds can be processed and tracked.
- Collections-only merchants can view and track settlements to verified accounts.
- Fraud monitoring is operational for supported transactions, with relevant merchant alerts shown where action is required.
- Wallet-enabled merchants can view available balances and perform enabled transfers/disbursements.
- Financial amounts and transaction statuses are accurately reflected across relevant merchant views.
- Merchant users can be assigned appropriate roles and permissions.
- Developers can test supported integrations through the sandbox.
- Critical payment, refund, settlement, fraud-monitoring, and wallet journeys have successfully passed UAT.

DOCUMENT PRINCIPLE

This PRD defines what the PSP Merchant Portal must deliver from a product and merchant-experience perspective. Detailed technical implementation and system architecture are maintained separately within the

engineering specifications.
